

GIKI Event Hub

Society Event & Ticketing Platform

CS324 — Human Computer Interaction · Milestone 3

BSCS · Batch 33 · GIKI

Raja Bilal Khurram (2023591) · M. Haris (2023428) · M. Ammar Saleem (2023378) · M. Bilal Shaikh (2023802)

Society events live in too many places.

And students keep missing out.

01

Posters & WhatsApp chaos

Events scattered across Instagram, batch emails, hostel WhatsApp groups, and printed posters on faculty gates. No single source of truth.

02

Unreliable ticketing

Manual cash collection, price miscommunication ("was Rs 2,500... paid Rs 3,000"), no audit trail, easy disputes.

03

No attendance proof

Google Forms for registration, manual check-in lists, no QR validation. Easy to fake, hard to audit.

04

Admin friction

Society events approved over email and paper. Venue clashes only surface days before. No visibility for the Dean's office.

One hub. Three dashboards. Live for everyone.

A single platform that replaces posters, WhatsApp, Google Forms, and email approvals.

For Students

Discover • Book • Attend

- Filterable feed of every approved event
- Online or cash payment, instant QR ticket
- Refund flow with multi-stage progress
- Review the event after check-in

For Organizers

Create • Manage • Scan

- 3-step form with live preview & conflict warning
- Real QR camera scanner on laptop or phone
- Sub-organizer invites by @giki.edu.pk email
- Event summary: registrations, attendance, reviews

For the Dean

Approve • Oversee • Analyze

- Single queue: events, societies, organizers
- Conflict detection across the campus calendar
- Reject-with-feedback opens in-app chat thread
- Society drill-down analytics (events, reviews)

Every action ripples through every dashboard in real time — no email tag, no missed events.

Where the personas came from.

Survey + structured interviews with three user classes across campus.

3

User classes covered

Students · Organizers · Administration

8+

In-depth interviews

Across 6 societies and the DSA office

16

Structured questions

Tailored by role, all open-ended

Form responses live here:

<https://docs.google.com/spreadsheets/d/1fIAdYdyx6DAh-Yibkb7vIWU4tlo5JN303ZHs2lgcCU/edit?usp=sharing>

Click to open. Sheet contains every raw response — by user class, with original wording preserved. All persona traits, pain points, and feature priorities map back to a quote here.

Six interviewees, three perspectives.

Real responses from each are referenced throughout. Photos can be swapped in — placeholders for now.

Hassan Iqbal

Student

[swap with photo]

"Forms are too long — they ask email AND reg number."

Mumtaz Ali

Student (primary persona basis)

[swap with photo]

"Missed Netronix SNP last year — nobody told me."

Ammar Ahmed

Organizer • Society Lead

[swap with photo]

"Cross-checking payments for paid events is painful."

Hamza Faraz

President • MLSA

[swap with photo]

"We need attendance tracking and proper ticketing."

Mahd Aqeel

Organizer

[swap with photo]

"There is no mechanism for tracking actual attendance."

Sabir

Dean of Student Affairs

[swap with photo]

"A centralised platform would streamline everything."

Mumtaz Ali — the busy student.

Mumtaz Ali

Age 21 · BSCS, 6th semester

Tech level: High

Student

Power user

GOALS

- Find relevant events fast — without scrolling Instagram.
- Book tickets in under a minute — minimal form-filling.
- Get clear confirmation + a ticket that works at the door.

PAIN POINTS

- Misses events because info reaches him too late.
- Long registration forms ask the same info twice.
- Price miscommunication at the door — cash-only events.

"Sadly yes — I wanted to attend Netronix SNP last year. Nobody told me about the event."

The people running and approving the events.

SECONDARY

Ammar Khan

President · Literary & Debating Society (LDS)

Age 23 · BS Data Science · Organizes debates and speaker series. Persona built from Ammar Ahmed's & Mahd Aqeel's interviews.

AK

GOALS

- Submit events fast, get quick approval
- Track registrations and revenue in one place
- Scan tickets at the door without third-party tools

PAIN POINTS

- Manual registration handling drains volunteer hours
- Hard to spot duplicates or no-shows
- Approval emails get lost in chains

TERTIARY

Sabir

Dean of Student Affairs

Reviews every society event for policy, safety, and venue clashes. Persona built from Sabir's interview.

SB

GOALS

- Centralised approval queue with full context
- Detect venue and time conflicts automatically
- Audit trail for budget and resource requests

PAIN POINTS

- Manually checking for overlapping events
- Approvals via paper / email — no status tracking
- Limited visibility once an event goes live

Three iterations. Three big leaps.

Driven by feedback after every milestone — the design got sharper each pass.

v1

Low-fidelity wireframes

Pencil & paper · Figma boxes

- Mapped three role flows on paper
- Three design alternatives — A, B, C
- Identified the 9 essential screens

Kept: Design A (filter-driven event list).

v2

HTML phone prototype

Clickable mockup · device frame

- All 11 screens linkable in one HTML
- Toast feedback + chip filters working
- First end-to-end task walkthrough

Changed: needed real state, not just visuals.

v3

Live Next.js application

Real auth, state, scanner, chat, reviews

- Three persistent role dashboards
- Real camera QR scanner + sub-organizer flow
- Payment, refunds, reviews, society approval

Proved: every requirement, end-to-end.

Real product behaviour — not screens.

Built end-to-end in Next.js. Three dashboards share one in-memory store, so every action propagates live.

End-to-end ticketing

Discover → book → online or cash payment → printable QR ticket with a short manual code as fallback.

Real camera scanner

getUserMedia + jsQR on laptop or phone. Live verified-list sidebar, paste fallback, duplicate scan rejection.

Refund with progress

Multi-stage UI (initiated → processing → completed), push notifications to student and organizer.

Society approval flow

Organizer signup with society dropdown; new societies go to Dean queue; multi-organizer per society.

Reject with chat

Dean's rejection opens an event-specific chat thread with unread indicators — no email tag.

Post-event reviews

Auto-prompted after check-in. Organizer sees rating distribution + comments on event summary.

LIVE DEMO

Let's open it.

Three dashboards, three credentials, one ripple effect.
